Views = all views counted inside the period (Reels + posts + stories), as on the Insights screens; sun care and other ranges are split as in the reconciliation table. Followers = deterministic model from 32,588 on 4 July (+52.8 a day + 1 per 50 likes and comments); observed anchors: 15 Apr (28.2K), 14 Oct (38.8K), 23 Oct (40.4K). O observed · E estimated. The 107K-view Reel of 15 August is unrelated to sun care. A post's lifetime views can exceed what falls inside a period: the 25 Jul Reel has 43,300 views, 42.1K of them by 31 July. Not a screenshot of Instagram.
