APPENDIX · ILLUSTRATIVE MOCKUP · SIMULATED DATA

Meta Business Suite Insights for @laboratoires_nihel (Instagram)

Desktop Insights screens for the sun care launch window (Jul 5, 2026 - Sep 1, 2026), laid out like the reference Business Suite screenshots. All figures are the same simulated data as the Instagram app mockup; nothing is added.

Screens

Page	Screen	Shows
2	Content › Overview	Views, reach, interactions; daily views; views by content type
3	Content › Overview (scrolled)	Top content by views; top content formats
4–5	Results	Views, reach, interactions, link clicks, visits, follows
6	Content › Content	All content table, sorted by views
7	Post detail	Baume bronzant SPF 30 – Soleil & Tiaré (top sun care post)
8	Audience	Followers, age, gender, cities, countries

How the data maps to the screens

Business Suite metric	Source value	Value
Views	Views, window (Reels + posts + stories)	269,098
Reach / Viewers	Accounts reached, window	69,914
Content interactions	Likes + comments + shares + saves + story replies	4,452
Link clicks	Bio link taps	30
Visits	Profile visits	847
Follows	Gross follows (net + unfollows)	3,793
Followers (lifetime)	Followers on 1 Sep	35,774

Left out because the data does not exist

Comparison with the previous period (the green "↑ %" badges), organic vs ads split, Facebook figures, watch time, 3-second views, number of stories published, and the age × gender cross-split. The views breakdown therefore uses content type instead of organic/ads, the age chart shows age only, and charts without daily data show the empty-state illustration, as Business Suite does.

Derived series

Daily views and follows, views and interactions by format, and the post's cumulative views come from the same deterministic model as the app mockup (rules 1 and 5). `scripts/model.py` checks that they add up exactly to the source totals.
