APPENDIX · ILLUSTRATIVE MOCKUP · SIMULATED DATA

Meta Business Suite Insights for the Laboratoires Nihel Facebook Page

Desktop Insights screens for the sun care launch window (Jul 5, 2026 - Sep 1, 2026) with Facebook selected, laid out like the reference Business Suite screenshots. The 27 Facebook publications (17 Reels, 10 photo posts) are each matched to their Instagram twin by image.

Followers (unchanged)	Views · window	Content interactions	Viewers · window
105,000	**20,709**	**196**	**5,493**

What is observed and what is estimated

O **Observed:** Reel views as displayed (1K, 1.4K… rounded by Facebook), likes, comments and shares shown on every tile (a missing number = 0). The 10 photo posts' Facebook views are not shown. Observed: 105K followers before, during and after the launch (the count never changed), so net follows over the window = 0.

E **Estimated:** views of the 10 photo posts, viewers, visits, link clicks, the day-by-day split and all audience data.

Not on Facebook: the 15 Aug black-and-white Reel and the two collab Reels (5 and 20 July) have no Facebook twin. No stories, watch time or 3-second views are available, so those tiles are left out.

Rules

Dates. Each Facebook item is dated like its Instagram twin (same visual, cross-posted the same day).

Reel views. As displayed by Facebook: “1K” = 1,000, “1.4K” = 1,400; values under 1,000 are exact.

Photo views. Not shown by Facebook: Instagram views of the twin × the median Facebook/Instagram view ratio of the Reels whose Instagram twin is a Reel (observed on both).

Day by day. Rule 1 of the Instagram model: 40% on day 1, then −40% a day over 30 days.

Viewers. Each item reaches the same share of its views as its Instagram twin (reach ÷ views); accounts reached over the window = 55% × 85% of the summed reach (rule 4).

Content interactions. Likes + comments + shares, as shown on Facebook.

Visits and link clicks. Rule 7: visits 0.63% of reach, link clicks 3.5% of visits.

Followers. 105K throughout (observed): follows = unfollows, net 0. Demographics are not available for Facebook: the Audience screen reuses the Instagram estimates.

Photo views ratio: median of 16 Reels = 16.3% of Instagram views. Lifetime interactions of the 27 items: 204; 196 of them fall inside the window (rule 1). All sums are checked by `scripts/facebook_model.py`.
